## **MintHealth Update**

The MintHealth team is making great progress in realizing its vision of placing the Patient at the center of Healthcare by aligning stakeholders and enabling value-based care. In the last couple of months, we have conducted dozens of briefings, presentations, and collaborations where we consistently receive confirmation from our industry-leading advisors, prospective customers, partners, and the Healthcare Community that our platform is transformative.

At the same time, the Blockchain Ecosystem upon which we are leveraging, continues to experience rapid advancements in both its underlying technology and how it is incubating new business models on the Blockchain with Initial Coin Offerings (ICO's).

We believe this rapid innovation will continue for the foreseeable future, and along with it, the need for us to adapt and evolve MintHealth's incubation and operating models to best meet the needs of Patient Customers, Partners, Employees, and the Healthcare Ecosystem stakeholders. We view this as a positive development greatly enhancing the value, integrity and funding of Blockchain-based ventures, including MintHealth.

### **Security Token (MHST)**

We have seized on this opportunity and are evaluating the development of a new MintHealth security token (MHST), that would entitle token holders to equity ownership in MintHealth as well as certain dividend and voting rights.

### **Engagement Token (VIDA)**

MintHealth will retain Vidamints (VIDA) as a pure utility token used by risk bearing entities (*insurance plans, self-insured corporations, health systems, etc.*) looking to reduce the cost of caring for moderate and high-risk patients and employees, as well as to build brand loyalty for companies similar to reward points for airlines and hotels. VIDA will enable existing patient care platforms to become Blockchain and token enabled via MintHealth application APIs. For more details on the VIDA model, please see our whitepaper.

As the primary revenue stream of MintHealth, VIDA tokens will be used to engage patients with daily, highly personalized activities that can be redeemed across multiple ecosystem stakeholders while improving patient health and lowering insurance costs. Under this token structure, VIDA are solely a digital product sold for use in the MintHealth ecosystem and are not traded on an open exchange. The VIDA token provides complete transparency on the quantity and price of tokens that are sold, as well as complete transparency and verifiability of the revenue that is payable to MHST token holders.

As one of the first entities in the US to offer a Security Token, we believe this token structure leverages Blockchain transformation and provides an opportunity to participate in the token economy that is compliant and familiar to investors. We thank you for your support and look forward to your continuing commitment to MintHealth.
